

ASSIGNMENT No. 3

Complex Computing Problem

Course Title: Web Engineering
Course Code: SEN-310
Class: BS (CS)-6 (A & B)
Submission deadline: 15-5-23
Course Instructor: Ms. Fatima Bashir

Group Members:

Muhammad Saad Iqbal (02-134191-018)
Ali Gauhar (02-134202-006)
Naeem Ur Rehman (02-134202-053)

Introduction:

The expense tracker web application is a powerful tool designed to assist individuals in efficiently managing their finances in this fast-paced world, debt monitoring is becoming more and more important to maintain financial stability and make informed financial decisions. This web application provides an efficient solution using HTML, CSS, JavaScript, PHP and Laravel technologies to provide users with a smooth and intuitive spending experience.

With this budget, users can track their expenses in food, accommodation, transportation, entertainment and many other areas. It goes beyond simple spending by tracking different payment methods such as cash, credit/debit cards, and other transactions.

By recording expenditures on a daily, weekly or monthly basis, users can understand their spending and patterns.

Additionally, Spending Tracker allows users to create detailed reports that show their spending by category, payment method and time. These reports provide an overview of their financial activities, facilitating better spending and informed decision making.

Login and Registration System:

Our expense tracker web application features a secure and user-friendly login and registration system. Users can create an account with essential details, and we implement validation checks to ensure data accuracy. User authentication utilizes industry-standard security measures, including password hashing. With session management, users can seamlessly log in and navigate the application. Our focus on security ensures the protection and privacy of user data.

Expense Categories:

Expense Categories in our expense tracker web application enable users to organize their expenses effectively. Users can create custom categories such as food, housing, transportation, entertainment, and more. This categorization feature allows users to track and analyze their spending habits in a structured manner. By assigning expenses to specific categories, users gain insights into their major areas of expenditure. With the ability to manage and customize expense categories, our application provides a flexible and personalized expense tracking experience.

Payment Methods:

Our expense tracker web application supports a wide range of payment methods, ensuring comprehensive tracking of expenses. Users can easily record expenses made through various payment options such as cash, credit/debit cards, and other digital payment methods. This flexibility allows users to accurately monitor their spending habits across different payment platforms. By categorizing expenses based on the payment method used, users gain a clear understanding of their preferred spending channels and can make informed decisions about their financial transactions.

Expense Tracking:

Expense tracking is a fundamental feature of our expense tracker web application. Users can effortlessly record their expenses, including the date, amount, category, and payment method. This allows for a comprehensive overview of spending habits and patterns. With the ability to track expenses on a daily, weekly, or monthly basis, users gain valuable insights into their financial activities over time. The application enables users to add, edit, and delete expenses, ensuring accurate and up-to-date records. With efficient expense tracking, users can make informed financial decisions and effectively manage their budgets.

Reports Generation:

Our expense tracker web application offers strong reports generation capabilities, empowering users with valuable financial insights. Users can generate reports summarizing their spending by category, payment method, or time period. These reports provide a comprehensive overview of their financial activities, helping them analyze their expenditure patterns and make informed budgeting decisions. With the ability to visualize spending trends and identify areas of focus, users can effectively manage their finances and track progress towards their financial goals. The reports generated by our application serve as a valuable tool for financial planning and decision-making.

<p>Solution must be designed by applying the following attributes/characteristics
</p>
<p>
Attribute Problem Solving description
</p>
<p>
Depth of analysis required Requires PHP storm, Dreamweaver, Phpmyadmin, Laravel, etc
</p>
<p>
used to develop web application
</p>
<p>
Depth of knowledge required Conceptual programming fundamentals knowledge would
</p>
<p>
be needed to solve this well-defined computing problem.
</p>

```

<h1>Objective</h1>

<p>The purpose of this assignment is to apply what you learnt about the client side and server- side scripting to create an expense tracker web application.

Scenario

</p>

<p>

An expense tracker can track any expenses that involve the exchange of money, whether it is cash or electronic payment. It provides a convenient way to record and categorize expenses, allowing users to monitor their spending patterns, set budgets, and gain insights into their financial habits.

Consider the above scenario and develop a web application by applying the web engineering concepts on the following features:

</p>

<p>

- Categorization: An expense tracker can categorize expenses into different categories,

</p>

<p>

such as food, housing, transportation, entertainment, and more.

</p>

<p>

- Payment type: An expense tracker can track expenses made with various payment methods, including cash, credit/debit cards.

</p>

<p>

- Frequency: An expense tracker can track expenses that occur daily, weekly or monthly.

</p>

<p>

- Reporting: An expense tracker can generate reports that summarize spending by category, payment method, or time period.

</p>

<p>

- Analyze and apply the best security solution to develop this tracker.

Task

</p>

<p>

Develop an Expense Tracker web application while considering the above features by applying the appropriate PHP concepts of client-side and server-side scripting.

</p>

<h1>

Assumptions

</h1>

<p>

The following are assumptions that must be considered.

</p>

<p>

- As inflation is increasing day by day it is very important to control expenses so this cost-effective solution is designed at the student's level which can be utilized by anyone who faces difficulty managing their personal or business expenses.

</p>

<p>• Another assumption is to help people become more aware of their spending habits, which can lead to increased financial literacy.

</p>

<h1>Deliverables

</h1>

<p>An Expense Tracker web application that will manage users' expenses while applying the security solution.

</p><p>Note: Above mentioned deliverables must be provided in one file with a title and table of content in soft and hard copies both.

</p>

</body>

Conclusion:

In conclusion, our expense tracker web application provides individuals with a powerful tool to effectively manage their expenses, gain valuable financial insights, and enhance their financial well-being. With features such as a secure login and registration system, expense categorization, payment method tracking, expense tracking, and comprehensive reports generation, users can easily monitor their spending habits, make informed financial decisions, and maintain financial stability. The application's user-friendly interface and robust security measures make it a reliable and efficient solution for managing personal finances.
